

PRODUCT REQUIREMENTS DOCUMENT • SAMPLE ASSIGNMENT

Digital Heroes PRD

(Level 1)

A golf performance and charity draw platform brief for full-stack development trainees. *Edition 2026*

Six core objectives, one owned platform. This document is the single source of truth for what you are asked to design, build, and ship during the selection process.

What's *inside*.

Sixteen sections covering the full product specification — from platform overview through evaluation criteria. Read in order, or jump to what you need.

§ 01	Project overview	03	§ 09	Winner verification	08
§ 02	Core objectives	03	§ 10	User dashboard	08
§ 03	User roles	04	§ 11	Admin dashboard	09
§ 04	Subscription & payment	05	§ 12	UI / UX requirements	10
§ 05	Score management	05	§ 13	Technical requirements	11
§ 06	Draw & reward system	06	§ 14	Scalability considerations	11
§ 07	Prize pool logic	06	§ 15	Mandatory deliverables	12
§ 08	Charity system	07	§ 16	Evaluation criteria	13

This PRD outlines the complete product specification, combining performance tracking, monthly prize draws, and charitable giving. Prepared by Digital Heroes as a sample assignment for evaluating full-stack development trainees during the selection process, it serves as the single source of truth for design, development, and evaluation.

The *platform*.

A subscription-driven web application combining golf performance tracking, charity fundraising, and a monthly draw-based reward engine — built to feel emotionally engaging and modern, deliberately avoiding the aesthetics of a traditional golf website.

§ 01.1 · WHAT USERS DO

- Subscribe to the platform (monthly or yearly)
- Enter their latest golf scores in Stableford format
- Participate in monthly draw-based prize pools
- Support a charity of their choice with a portion of their subscription

§ 02 · CORE OBJECTIVES

ENGINE

Subscription

Build a robust subscription and payment system.

EXPERIENCE

Score entry

Simple, engaging score-entry flow.

ENGINE

Custom draw

Algorithm-powered or random monthly draws.

INTEGRATION

Charity

Seamless charity contribution logic.

CONTROL

Admin

Comprehensive admin dashboard and tools.

DESIGN

Outstanding UI/UX

A look that stands out in the golf industry.

Who uses *it*.

Three roles, each with a defined boundary of access — from anonymous browsing to full platform control.

ROLE 01

Public visitor

- View platform concept
- Explore listed charities
- Understand draw mechanics
- Initiate subscription

ROLE 02

Registered subscriber

- Manage profile & settings
- Enter / edit golf scores
- Select charity recipient
- View participation & winnings
- Upload winner proof

ROLE 03

Administrator

- Manage users & subscriptions
- Configure & run draws
- Manage charity listings
- Verify winners & payouts
- Access reports & analytics

Subscribe. *Score.*

§ 04 · SUBSCRIPTION & PAYMENT SYSTEM

PLANS	Monthly plan and yearly plan (discounted rate)
GATEWAY	Stripe (or equivalent PCI-compliant provider)
ACCESS CONTROL	Non-subscribers receive restricted access to platform features
LIFECYCLE	Handles renewal, cancellation, and lapsed-subscription states
VALIDATION	Real-time subscription status check on every authenticated request

§ 05 · SCORE MANAGEMENT SYSTEM

Input requirements

- Users must enter their last 5 golf scores
- Score range: 1–45 (Stableford format)
- Each score must include a date

Functional behaviour

- Only the latest 5 scores are retained at any time
- A new score replaces the oldest stored score automatically
- Scores display in reverse chronological order (most recent first)

Note: Only one score entry is permitted per date. Duplicate scores for the same date are not allowed — an existing entry may only be edited or deleted.

The *draw*.

DRAW TYPES	DRAW LOGIC	OPERATIONS
• 5-number match • 4-number match • 3-number match	• Random — standard lottery-style • Algorithmic — weighted by score frequency	• Monthly cadence • Admin controls publishing • Simulation before publish • Jackpot rollover if unclaimed

§ 07 · PRIZE POOL LOGIC

A fixed portion of each subscription contributes to the prize pool. Distribution is pre-defined and enforced automatically.

MATCH TYPE	POOL SHARE	ROLLOVER?
5-Number match	40%	Yes — jackpot
4-Number match	35%	No
3-Number match	25%	No

- Auto-calculation of each pool tier based on active subscriber count
- Prizes split equally among multiple winners in the same tier
- 5-match jackpot carries forward if unclaimed

Give *back.*

Charitable impact leads the platform's story. Every subscriber directs part of their fee to a cause they choose.

§ 08.1 · CONTRIBUTION MODEL

- Users select a charity at signup
- Minimum contribution: 10% of subscription fee
- Users may voluntarily increase their charity percentage
- Independent donation option, not tied to gameplay

§ 08.2 · CHARITY DIRECTORY FEATURES

DISCOVERY

Directory

Charity listing page with search and filter.

DETAIL

Profiles

Description, images, and upcoming events such as golf days.

HOMEPAGE

Spotlight

Featured charity section on the homepage.

Verify. *Display.*

§ 09 · WINNER VERIFICATION SYSTEM

ELIGIBILITY	Verification process applies to winners only
PROOF UPLOAD	Screenshot of scores from the golf platform
ADMIN REVIEW	Approve or reject submission
PAYMENT STATES	Pending → Paid

§ 10 · USER DASHBOARD

Must include all of the following:

- ✓ Subscription status — active / inactive / renewal date
- ✓ Score entry and edit interface
- ✓ Selected charity and contribution percentage
- ✓ Participation summary — draws entered, upcoming draws
- ✓ Winnings overview — total won and current payment status

Full *control.*

Five control surfaces cover every operational need — from user management through reporting.

01

User management

- View and edit user profiles
- Edit golf scores
- Manage subscriptions

02

Draw management

- Configure draw logic (random vs. algorithm)
- Run simulations
- Publish results

03

Charity management

- Add, edit, delete charities
- Manage content and media

04

Winners management

- View full winners list
- Verify submissions
- Mark payouts as completed

05

Reports & analytics

- Total users
- Total prize pool
- Charity contribution totals
- Draw statistics

Feel, *not fairway*.

The platform must not resemble a traditional golf website. Design must be emotion-driven — leading with charitable impact, not sport.

FEEL	Clean, modern, motion-enhanced interface
AVOID	Golf clichés — fairways, plaid, club imagery as primary design language
HOMEPAGE	Clearly communicates what the user does, how they win, charity impact, and the call to action
ANIMATIONS	Subtle transitions and micro-interactions throughout
CTA	Subscribe button / flow must be prominent and persuasive

Under the *hood*.

Stack choices are yours to make, but the platform must be deployable, secure, and readable by a team that did not write it. The constraints below are not optional.

FRONTEND	Modern JavaScript framework (e.g. Next.js / React) — responsive and mobile-first
BACKEND	Server-side logic for subscriptions, score validation, draw execution, and payouts
DATABASE	Relational schema (e.g. Supabase / PostgreSQL) with enforced relationships and constraints
AUTHENTICATION	Secure signup, login, and session handling with role-based access for all three user roles
PAYMENTS	Stripe or equivalent PCI-compliant gateway — no card data stored on the platform
SECURITY	Input validation, protected admin routes, HTTPS, and environment-based secrets

§ 14 · SCALABILITY CONSIDERATIONS

The build must hold once subscriber numbers grow. Design for the second year, not the first month.

DATA	ENGINE	GROWTH
- Indexed queries on scores and draw entries - Pagination on all admin lists - Rolling 5-score retention enforced at write time	- Draw logic isolated from interface code - Simulation runs without publishing results - Prize calculation safe to re-run	- More than one draw per month supported - Charities added without a redeploy - Pool percentages configurable, not hard-coded

Note: Architecture is judged on extensibility. A working feature built so that it cannot grow will score lower than a simpler one that can.

What to *ship*.

LIVE WEBSITE	Fully deployed, publicly accessible URL
USER PANEL	Test credentials; signup / login / score entry / dashboard all functional
ADMIN PANEL	Admin credentials; user management, draw system, charities, winner verification
DATABASE	Backend connected (e.g. Supabase) with proper schema
SOURCE CODE	Clean, structured, well-commented codebase

§ 15.1 · DEPLOYMENT CONSTRAINTS

- Deploy to a new Vercel account (not personal/existing)
- Use a new Supabase project (not personal/existing)
- Environment variables must be properly configured

How we *judge*.

CRITERION	WHAT IT MEASURES
Requirements interpretation	How accurately the team translates requirements into features
System design	Quality of architecture decisions and data modelling
UI/UX creativity	Originality, polish, and emotional engagement of the interface
Data handling	Accuracy of score logic, draw engine, and prize calculations
Scalability thinking	Extensibility of the codebase and data structures
Problem-solving	How ambiguous requirements are identified and resolved

§ 16.1 · TESTING CHECKLIST

- ✓

User signup & login
- ✓

Subscription flow (monthly and yearly)
- ✓

Score entry — 5-score rolling logic
- ✓

Draw system logic and simulation
- ✓

Charity selection and contribution calculation
- ✓

Winner verification flow and payout tracking
- ✓

User dashboard — all modules functional
- ✓

Admin panel — full control and usability
- ✓

Data accuracy across all modules
- ✓

Responsive design on mobile and desktop
- ✓

Error handling and edge cases

Build it *well.*

This PRD is the single source of truth for design, development, and evaluation during the trainee selection process. Read it in full before starting — ambiguity is part of the test.

§ 17.1 · DOCUMENT DETAILS

ISSUED BY	Digital Heroes · digitalheroes.co.in
DOCUMENT TYPE	Product Requirements Document (PRD)
PURPOSE	Trainee selection process — sample assignment
VERSION	1.0 · March 2026
AUDIENCE	Full-stack development trainees / applicants

SAMPLE DOCUMENT · ISSUED FOR SELECTION PROCESS ONLY

– End of PRD · 2026 Edition –
